

Apple Pay®

Apple Pay changes how you pay with breakthrough contactless payment technology and unique security features built into your eligible Apple® device. So you can in an easy, secure, and private way.

How does it work?

To add your GWB debit card to Apple Pay, simply open your Wallet (Passbook) on your eligible Apple device and use your camera to instantly capture your card information. Or enter it manually.

Just hold your eligible Apple device near the contactless reader with your finger on TouchID™. A subtle vibration lets you know your payment information was successfully sent.

Once you've added your eligible GWB debit card to Apple Pay, you can track your spending right from your iPhone with Online and Mobile banking.

Additional Security

Instead of using your GWB debit card number to make a payment, Apple Pay assigns you a unique code (a virtual card number), which is securely stored on your device. Since your card numbers don't get transmitted with your payment, you get an added level of security. In addition, Apple Pay doesn't store any details of your transaction. All transactions are monitored by the same level of protection that monitors your GWB debit card.
