

Samsung Pay®

Samsung Pay® changes how you pay with breakthrough contactless payment technology and unique security features built right into your eligible Samsung® mobile device. So you can pay in an easy, secure and private way. GWB customers can now add their debit cards to Samsung Pay and start making purchases at millions of merchant locations faster than ever before.

How does it work?

To add your GWB debit card to Samsung Pay, open the Samsung Pay app and use your camera to instantly capture your card information. Or enter it manually. Samsung Pay will perform a quick validation with us before the card is ready to use.

Just swipe up on your screen and authorize your payment using your fingerprint. Then hold your eligible Samsung device near the contactless reader.

Once you've added your eligible GWB debit card to Samsung Pay, you can track your spending right from your phone or within Online and Mobile banking.

Additional Security

Instead of using your GWB debit card number to make a payment, Samsung Pay assigns you a unique code (a virtual card number), which is securely stored on your device. Since your card numbers don't get transmitted with your payment, you get an added level of security. In addition, Samsung Pay doesn't store any details of your transaction. All transactions are monitored by the same level of protection that monitors your GWB debit cards.
